

May 18 - 24, 2007

Terra spacecraft and instrument subsystems are in nominal operations.

Terra successfully performed Drag Make-up Maneuver #49 May 23rd. The burn time of 8.768 sec added 92 meters in altitude.

In mid June the Terra Solid State Recorder (SSR) will swap the allocations of memory unit 1 with memory unit 2 (DMU1-DMU2). The ASTER team has determined that science operations can continue with the fewer cards on DMU1.
